FUNCTIONAL TRAINING

Functionality and adaptability

SALTER provides a comfortable, easy and economical modular construction system that allows you to design the functional structure that best suits your needs and the available space.

Besides, your functional structure can grow as you need it. Just by adding more racks and combining different optional accessories to fit your needs and offer more workout options to your customers.

BASIC RACK F-1022

Technical specifications, F-1022 basic rack:

- 3 mm reinforced steel chassis.
- 200^a polyester black powder painting.
- Superior grips for suspension and dip/chin exercises.
- Support for upper bands.
- Horizontal bars.
- Height adjustable platform for easy access to dip/chin exercises.
- Vertical posts with 24 adjustment positions.
- Dimensions: 132 x 116 x 242 cm.

FREE RACK

Do you need more?

In addition to the basic rack, multiple accessories are available to offer the maximum performance and increase functional training workouts.

You can put together your functional structure easily and comfortably according to the available space.

Besides, SALTER functional structures do not require to be anchored to the floor or the wall, so that you can easily move it if required.

WALL RACK

Multiple options

Our sales team can make a proposal with no commitment, which will best suit your space and budget.

BRIDGE RACK

The SALTER modular system allows you to create independent structures and to add more racks and accessories to respond to the changing requirements from your customers.

MULTIPLE RACK

You can create multiple structures that enable group training and multiple exercises.

Besides, there are optional accessories that will help you keeping all accessories in place and tidy.

COMBINED RACK

More...

If you want to increase the possibilities of workout training, you can add pulleys to your functional structure.

You can combine the type of pulleys you prefer so that you will optimize the available space.
