*Ride on Design*

## Ciclotte Bike - Carbon and glass fibres

Ciclotte Bike is an innovative exercise bike, **designed and made in Italy, that combines idea, form and technology** rethinking the traditional aesthetic and functional values of an exercise bike.

Ciclotte Bike has been manufactured using exceptional materials like carbon, steel and glass fibres and represents a **complete innovation** in the fitness industry.

Designed by **Luca Schieppati**, Ciclotte Bike breaks the rules of gym equipment's design that have always emphasized only functional aspects, to address a target market of progressive, dynamic users that appreciate both physical and aesthetic lines.

Ciclotte's world was created from the need to introduce design into everyday living, a **real expression** of contemporary living where work and relaxation, exercise and entertainment share a single dimension, within fluid spaces where all objects can interact with each other.

Thanks to its essential lines, inspired by ergonomics, Ciclotte Bike is a fitness tool and a furniture complement that can be integrated into the most varied living contexts: home, office, gym and outdoors.

The large wheel of Ciclotte Bike is the heart of the project. A large circle reminiscent of monocycles from the end of the 1800's, which has been transformed into an **object of superior engineering**, destined to become **a must in the world of interior design and luxury fitness**.

Other distinctive features include the distinctive carbon handlebars and the support arms with their unique curvature.

From a technical viewpoint, Ciclotte Bike has been designed to faithfully reproduce the dynamics and performance of on-road cycling, and it is also ideal for high intensity aerobic training like spinning.

**Ciclotte Bike is the evolution of the project Ciclò**, an innovative prototype of a single wheel city bike, now part of Triennale Design Museum permanent collection in Milan after having participated in various international exhibitions.

## Ciclotte Bike Steel

Steel becomes a new way of thinking about fitness, and expressing the emotions in color with a more attractive price. Together with the use of steel for the frame, **carbon fibre remains for the handlebars and the rim**.

**Red, white and grey** are the standard available versions, completed by a wide palette of shades customizable on demand.

## Ciclotte Bike – Accessories

**The exclusive iPad and iPhone holder**, will increase the **level of entertainment** during the ride, giving the user the possibility to watch movies, or listen to music.

This innovative accessory can be integrated with a **package of electric devices**: a receiver connected with the mobile device and a cadence sensor attached to the transmission of Ciclotte Bike will let the user have **information on the workouts**, such as current speed, average speed and distance covered.

Moreover, the lateral ends of the accessory will provide comfortable **horizontal handlebars**, in alternative or addition to the vertical ones in carbon fibre of Ciclotte Bike.

## Ciclotte Bike - Awards & Nominations

### Wallpaper\* Design Awards 2010

\_Best Life Enhancer

### JEC 2010

\_Design Object in Composite Material
